

Since our last progress report to all of you at the beginning of April, uncertainty about when in-person meetings for this project can safely resume has not subsided. Nevertheless, April was a busy month and continued the process of adding to our understanding of issues that matter the most to residents and current conditions in the core neighborhoods.

The following is an overview of progress made during April, along with work currently underway.

Online Survey

The online survey that was open from late March through the end of April was designed to supplement the “What’s Working / What’s Not Working” exercise we performed with our Sub-Area Committees in February by putting a similar question before the general public. The survey asked people to identify the top three ‘selling points’ about their core neighborhood that are likely to attract new residents, as well as the top three ‘turn-offs’ that might deter people from choosing to live in the neighborhood.

Just over 300 responses were received, and our team has been working to categorize the open-ended answers for analysis and comparison. Although participants did not have a list of set responses to choose from, the answers they provided reveal a fair amount of consensus about the biggest selling points and turn-offs in individual neighborhoods, as well as those which transcend neighborhood boundaries.

Appendix A of this progress report provides a first glimpse of the most common answers from each neighborhood and how they compare across neighborhoods. You can compare these results to the “Working / Not Working” lists developed by the Sub-Area Committees (see Appendix A from the April 3rd progress report).

In your neighborhood...
What are the top three turn-offs?
What are the top three selling points?

300+ responses received

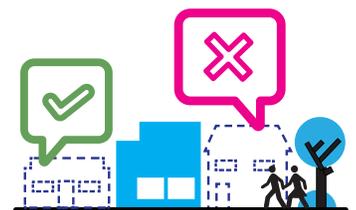

Does anything stand out to you when you review these lists of the most commonly cited positive and negative attributes? **Does anything surprise you?** If you have any observations you would like to share, please do so.

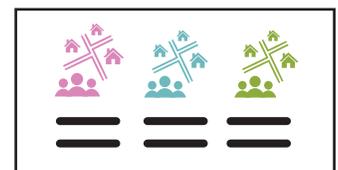

Infill Development Scenarios

At the beginning of April, we distributed a short survey to Sub-Area Committee members that presented a series of hypothetical infill development scenarios. The purpose of the exercise was to give us a sense of how those committee members react when change is proposed in their neighborhood—the issues and concerns that rise to the surface and the questions that get asked. It’s another way of pinpointing what matters most to people in the core neighborhoods.

Appendix B of this progress report provides an overview of what we learned based on the responses submitted by 30 members of the Sub-Area Committees.

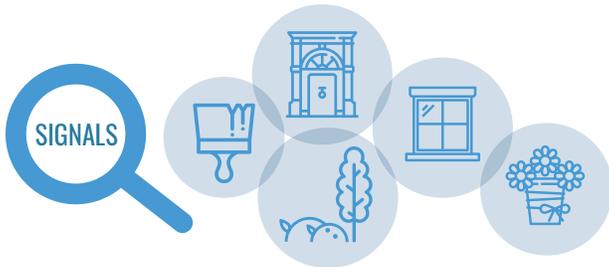

Responses from 30 members of the Sub-Area Committees

Do you think the responses align with concerns you’ve heard in the past when change is proposed in Fargo neighborhoods, especially in the core? Does anything surprise you? Please let us know **what you think**.

Field Survey of Residential Property Conditions

Our field survey of the 8,900 residential properties in the core neighborhoods began in April with the training of two students from NDSU and 10 volunteers from the Sub-Area Committees. The process, which will add to our base of knowledge about existing conditions and trends in the housing market, involves the scoring of each property on a simple 1-to-5 scale. How a property gets scored depends on the 'signals' that the property sends to passersby. Are there signs of conscientious upkeep and pride of ownership? Are there visible signs of deferred maintenance? What trajectory does the property appear to be on?

Field Survey Scoring

VERY HEALTHY ← → VERY UNHEALTHY

SCORE

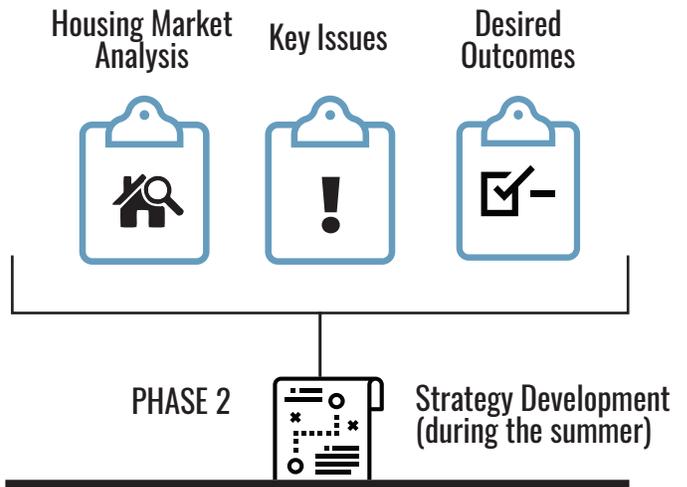

As of May 6th, over 3,000 properties in the core neighborhoods have been scored and completion of all scoring is anticipated by Memorial Day.

Housing Market Analysis

Results from the field survey are rapidly feeding into the datasets we are using to understand Fargo's housing markets and how they influence life and conditions in the core neighborhoods. **Over the course of May, findings from this analysis will be assembled alongside what has been learned so far about key issues and desired outcomes. All of this will provide a solid foundation for moving into Phase 2 of the project—starting with meetings (likely virtual) during the week of June 22nd, details forthcoming—where the focus will shift to strategy development.**

Questions?

If you have any questions about anything summarized in this progress report, or if you wish to discuss any aspect of the project, please don't hesitate to reach out to us. You can reach Peter Lombardi, project manager, at plombardi@czb.org and (703) 548-3708x7.

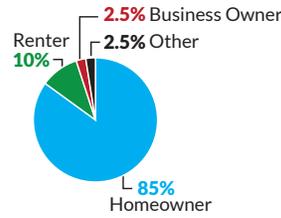

Thank you, as always, for your commitment to this project and for providing timely feedback.

Best regards,
czb

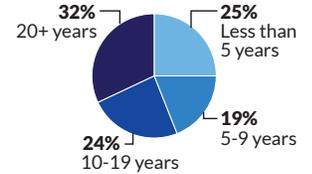

The first online survey of the Core Neighborhoods Master Plan was open to the public from the end of March through the end of April. Two rounds of promotion by Fargo’s Office of Communications and Public Affairs, along with peer-to-peer promotion by project committee members, garnered 303 completed surveys. Among survey participants, the vast majority were homeowners within the core neighborhoods, with an even mix of recent arrivals and longer-tenured residents.

Infill Development Scenarios

Sub-Area Committee members were presented with three infill development scenarios in early April through an online survey platform and were asked to respond to questions about each scenario, including what they liked about it, what concerned them, and what questions they would have for City staff and the Planning Commission. The following are the scenarios that were presented and analysis of the responses received from the 30 Sub-Area Committee members who completed the questions.

Scenario #1

Your 82-year-old neighbor just sold his house, which is located on a relatively large lot. The new owner, a doctor from Minneapolis who recently accepted a job at Essentia Health, plans to demolish the existing house and build a larger one to take full advantage of the size of the lot.

You see her walking the property with her architect. After you introduce yourself and offer her a quick welcome, she tells you that she just loves the neighborhood and wants to build a house very similar to the one she left in Minneapolis. Upon returning home, you quickly Google her name and find her prior address to get an idea of what she likely has in mind.

This is the photo you find:

We want to know **how you might react to this type of residential infill project** being proposed in your neighborhood.

Scenario #2

An oversized corner lot on the busiest road in your neighborhood is vacant and has been for years. It recently sold and the new property owners, a local development consortium, are taking it before the Planning Commission to request a rezoning that would allow them to build a four-plex in this traditionally single-family neighborhood.

The developers consider themselves socially aware and want the units to be affordable to households earning around 80% of the Area Median Income, which equates to households making around \$40,000. Their proposal has a maximum of three stories and one parking space per unit on site. They haven't yet determined if this will be an apartment (rental) building or a condo (for sale) building.

We want to know **how you might react to this type of residential infill project** being proposed in your neighborhood.

Scenario #3

Papa Murphy's Take N' Bake Pizza has been wildly successful in a neighborhood setting in Fargo, providing both a convenient service and a setting for casual run-ins with neighbors. A new local start-up, Mama Hilga's Home Cookin', would like to replicate that success and has plans to locate in your neighborhood.

There are three lots down the street from you that are for sale and face an arterial road. One lot is vacant and the other two are unmaintained houses in relatively poor condition. The owners of the restaurant have a purchase option on all three lots and are planning to work with the City to rezone it to allow neighborhood commercial development. Their restaurant would occupy one of the three commercial tenant spaces. Before going any further, they decide to coordinate with the neighbors to let you know their plans. Prior to the meeting, they provide a rendering that captures their initial design concept:

The developers want to know **what you think about their proposed neighborhood commercial building.**
